U.S. Housing Environment Analyze Dashboard

Analyze housing prices with income, air quality, climate risk, crime rate, and insurance cost.

U.S. Housing Price Distribution

From coast to coast, how extreme is the geographic divide in U.S. housing prices?

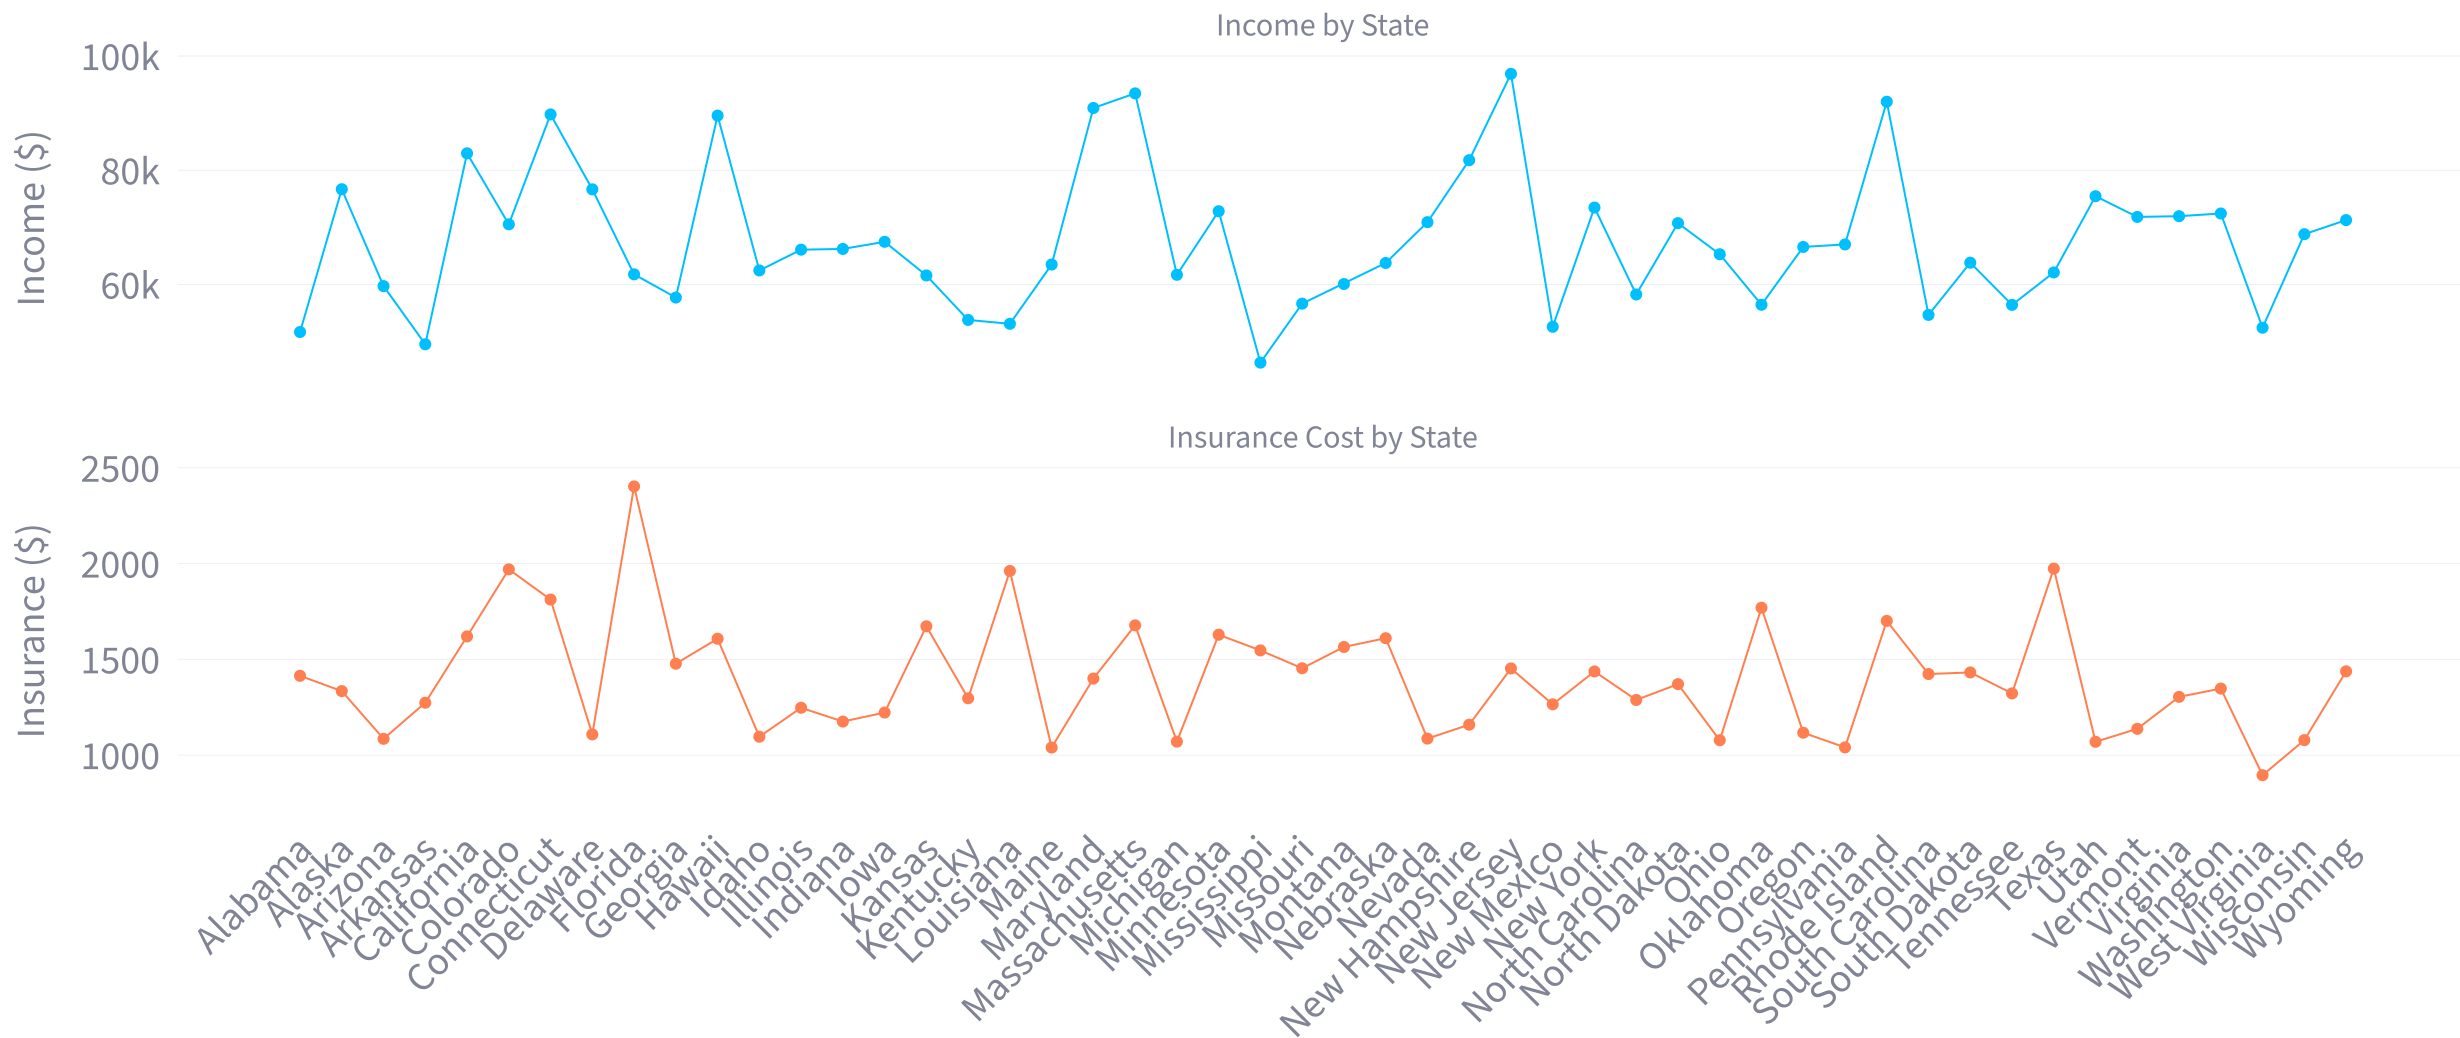

Income vs. Insurance Cost

Does earning a higher income inevitably mean paying more for risk, and how large is the real gap between income and insurance costs across different states?

Sort by:

- State Name (A-Z)
- High to Low (Income)
- High to Low (Insurance)

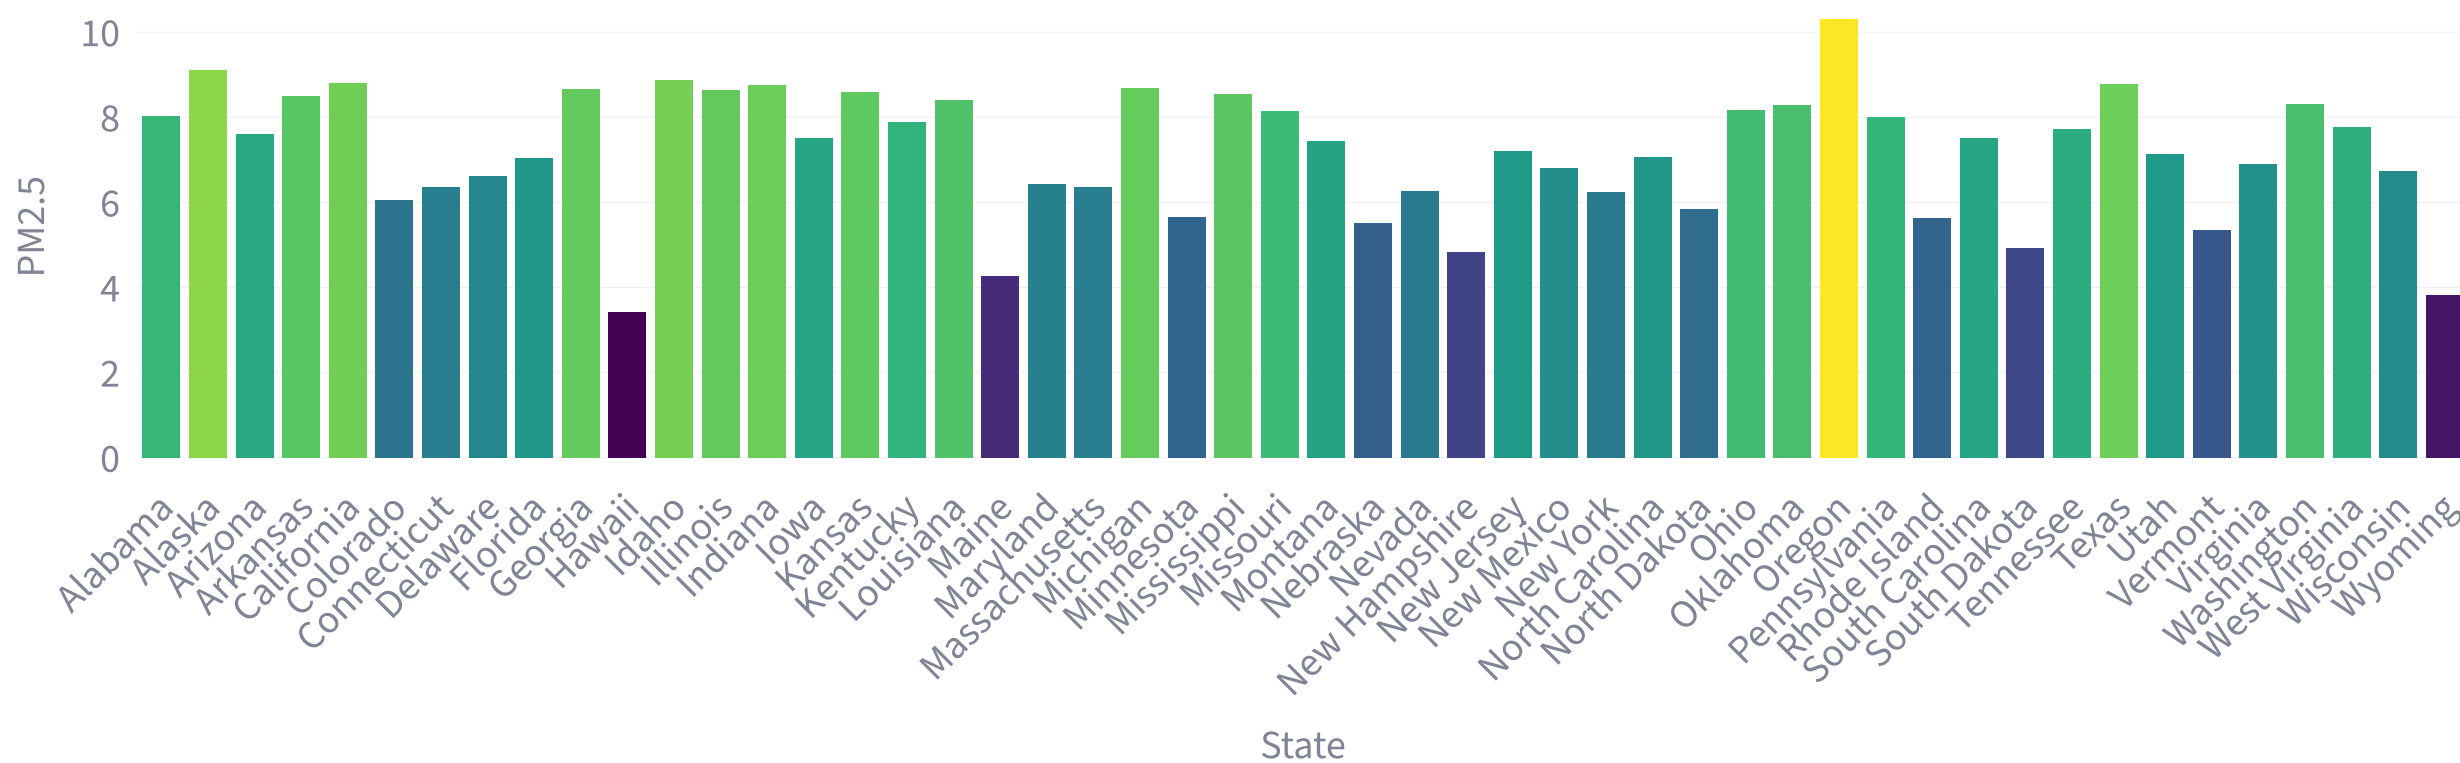

PM2.5 Air Quality

The cost of every breath: Which state offers the safest and cleanest air quality?

Sort by:

- State Name (A-Z)
- High to Low
- Low to High

Integrated Risk Assessment: Climate & Crime (Combined Living Risks)

Between natural disasters and crime, which states pose the highest combined threat to their residents?

Sort by:

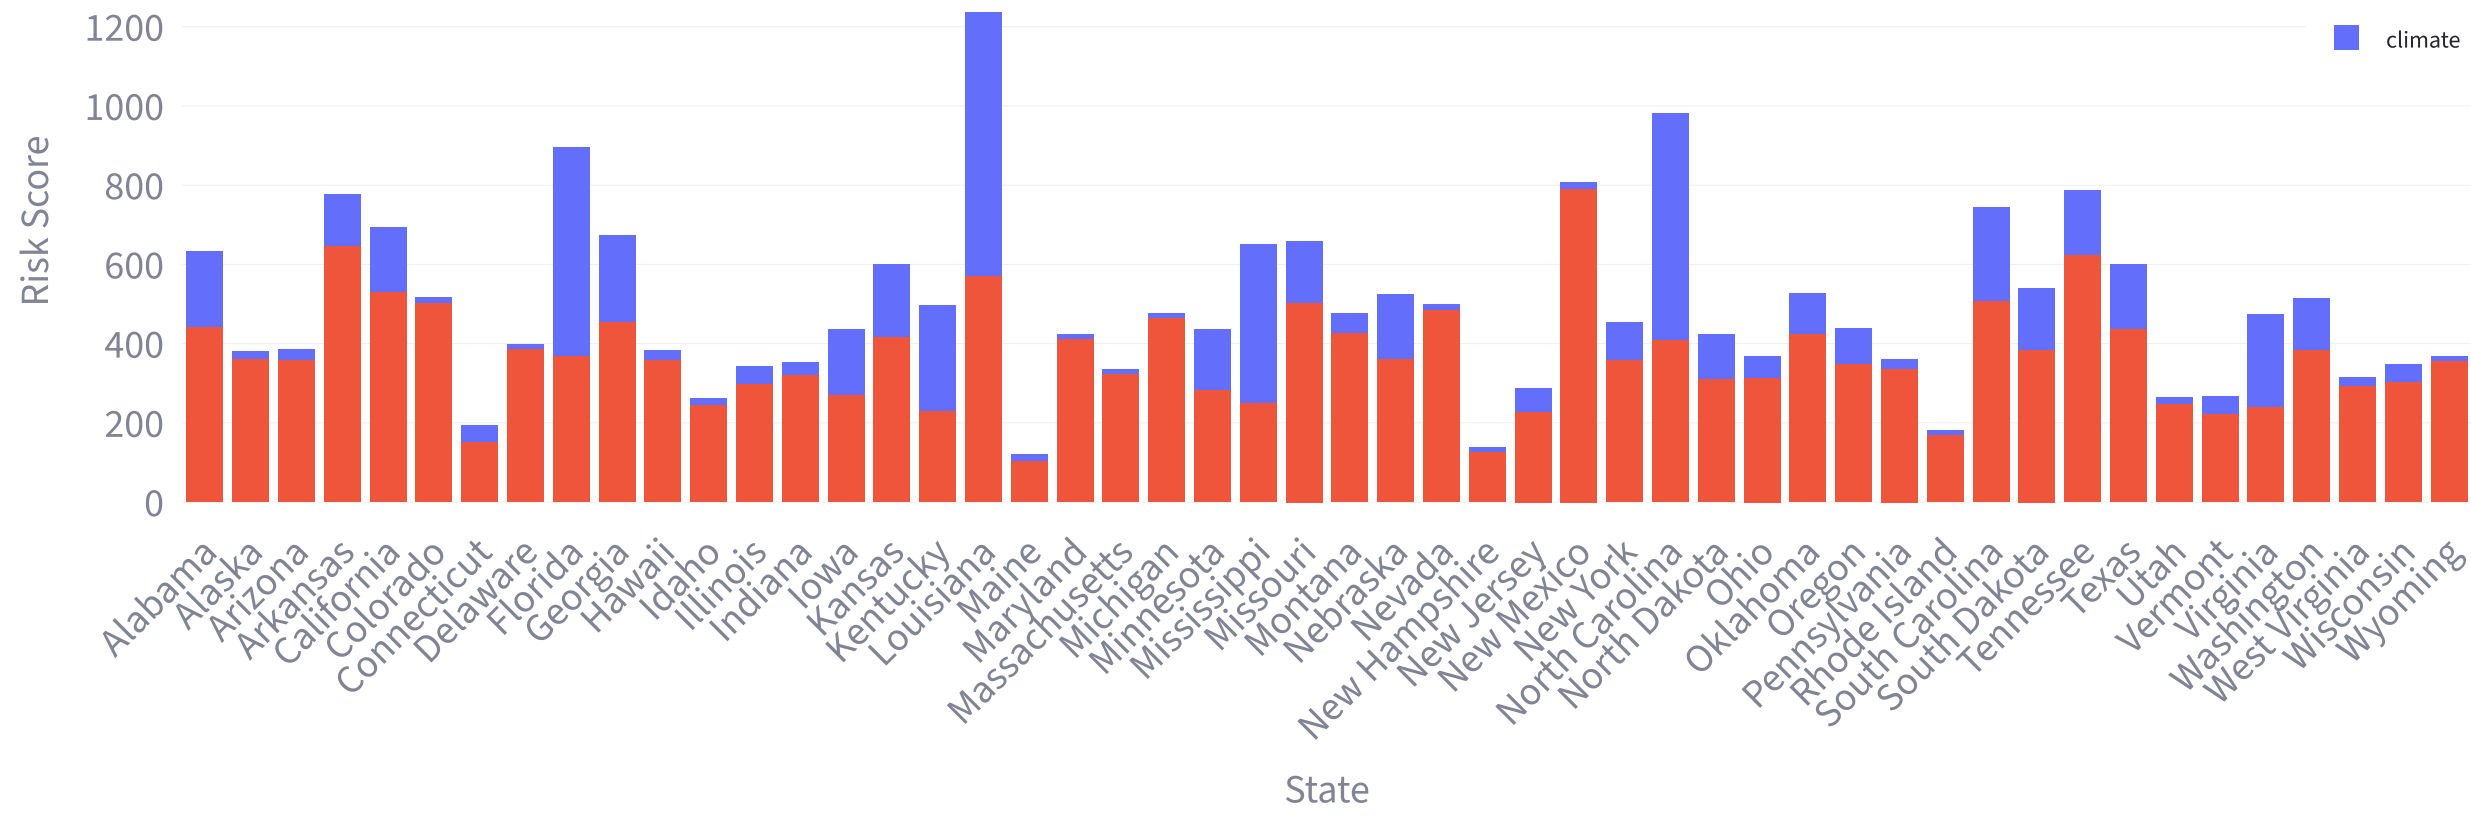

- State Name (A-Z)
- High to low (Overall)
- High to low (Crime)
- High to low (Climate)

- crime

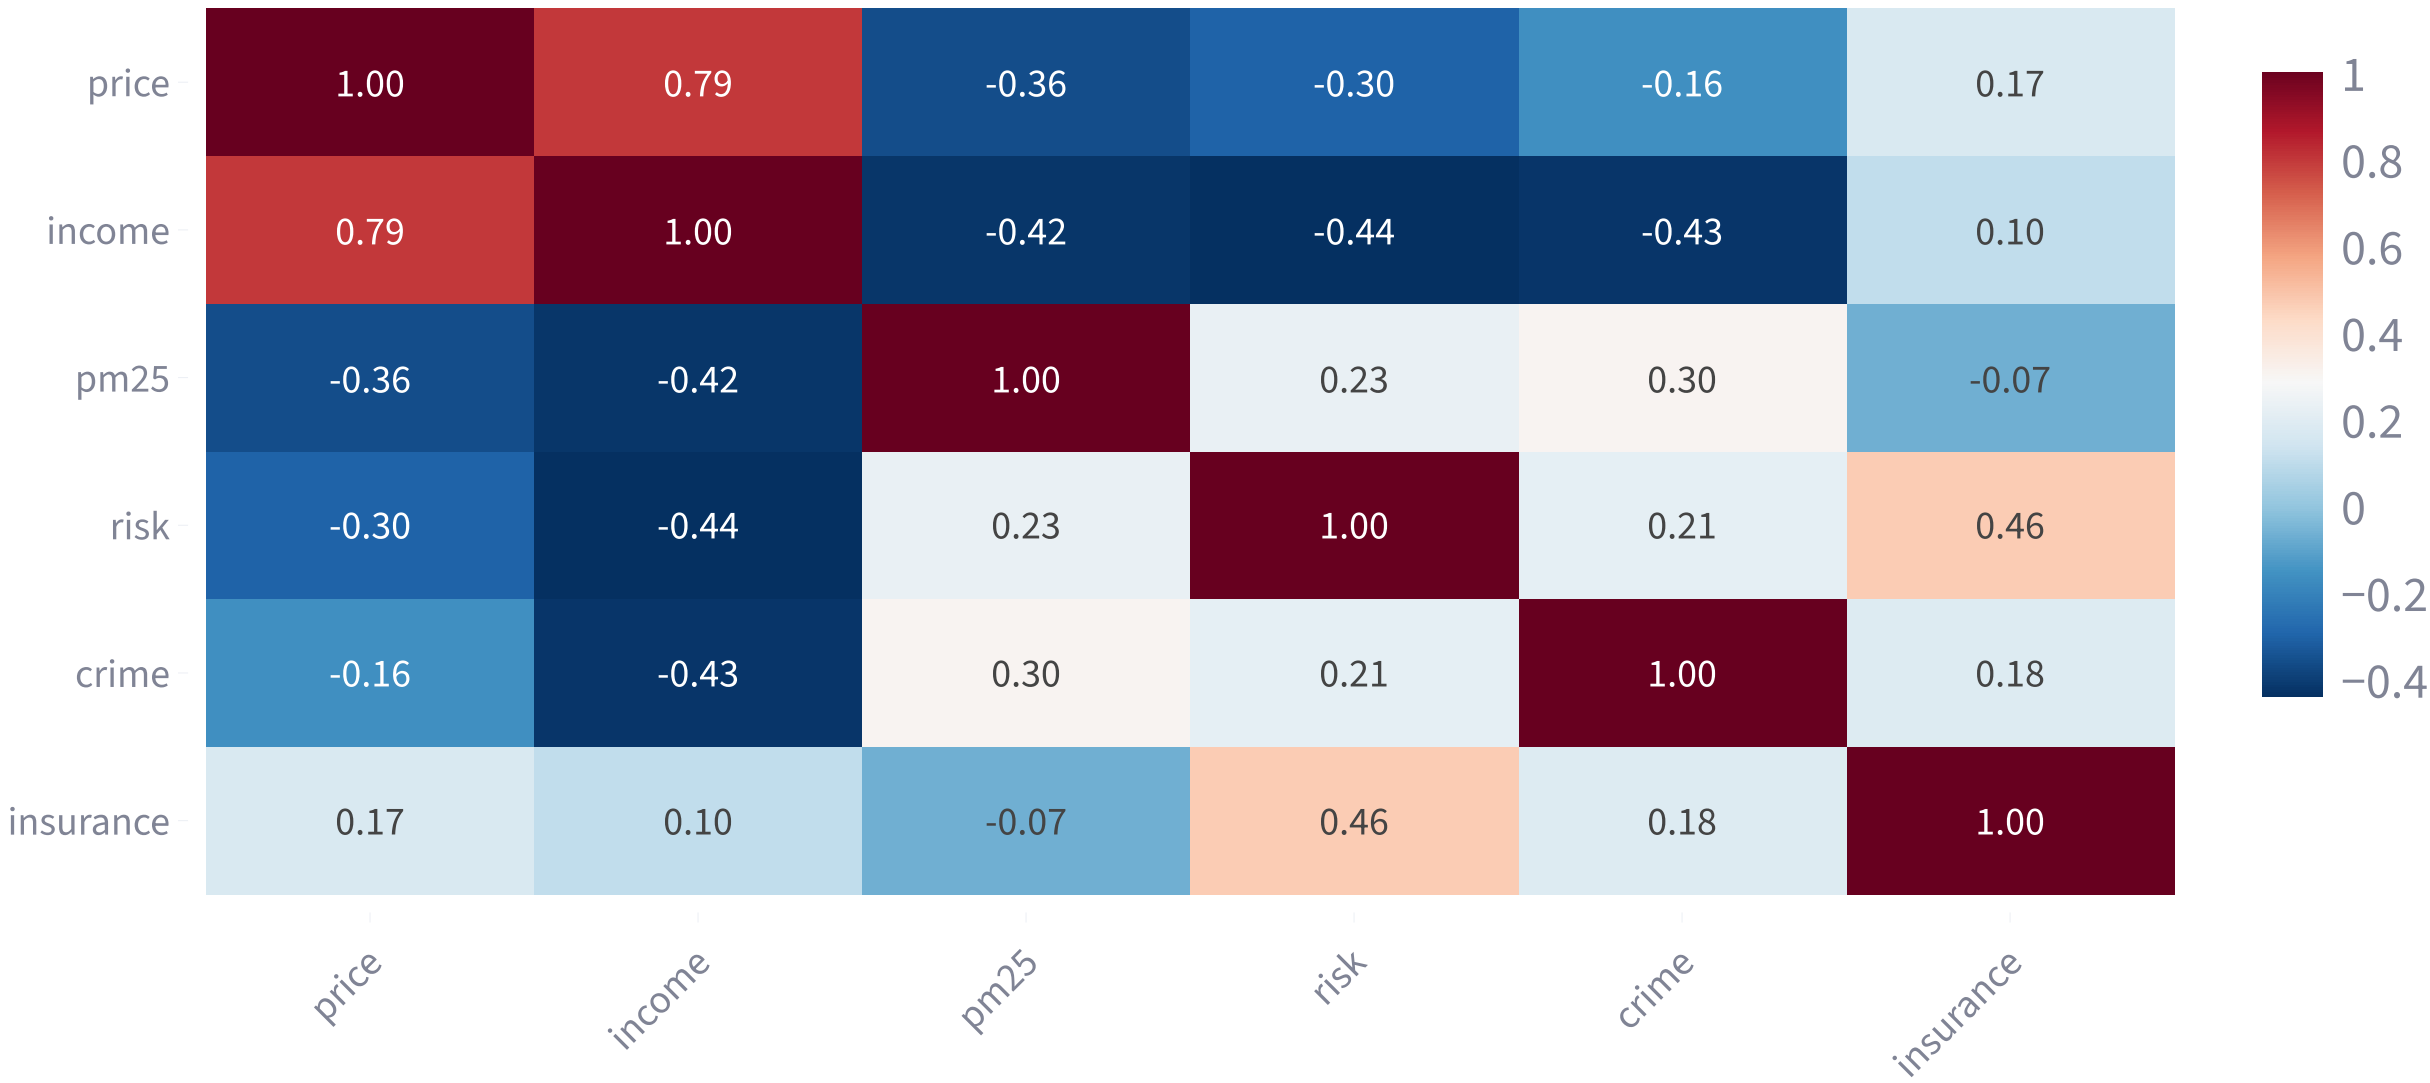

💰 Price vs Income & The Affordability Trend

Can you afford your dream home? Where in the U.S. does income actually keep up with housing costs?

🔗 Variable Correlation Heatmap

How do housing prices, income, and living risks actually influence one another behind the scenes?

📌 Project Overview

Problem Statement & Motivation: This dashboard aims to analyze how housing prices, income, and environmental and living risks interact to affect affordability and quality of life across U.S. states.

Data Resources:

- U.S. Census: Income & Housing Data
- EPA: PM2.5 (Air Quality)
- FEMA: Climate Risk Data
- U.S. Crime Data: Crime Rate
- Insurance Data: Home Insurance Costs

Methodology:

- Python:** Pandas for data cleaning & processing
- Plotly:** Data visualization (maps, charts, heatmaps)
- Streamlit:** Interactive dashboard development
- Analytical Setup:** Correlation Analysis (relationship between variables)
- Data Preprocessing:** Handling missing values using median imputation
